ESPRO POS

RETAIL & CAFE OPERATIONS HUB

# System User Manual

## Store Operations & Training Guide

Comprehensive operational procedures and reference manual for cafe counter sales, drink recipe costing, inventory management, staff timekeeping, and store financial reporting.

DOCUMENT VERSION
1.0

PUBLICATION DATE
October 2026

TARGET AUDIENCE
Store Owners, Managers & Baristas

PREPARED FOR
Espro Coffee & Tea

# Document Control & System Information

Standard operating manual providing procedures for counter sales, recipe management, inventory control, shift timekeeping, and store reporting.

**System Title:** Espro POS – Retail & Cafe Operations Hub

**Manual Identifier:** ESPRO-MAN-V1.0

**Version:** 1.0

**Publication Date:** October 2026

**Target Audience:** Store Owners, Shift Leads, Baristas & Cashiers

**Prepared By:** Store Operations & Training Department

**Operational Environment:** Philippine Peso (₱) | Asia/Manila (PHT)

## Operational Structure

This manual is organized into eleven operational chapters and reference appendices:

- **Chapters 1–4:** Counter operations (System overview, user authentication, shift timekeeping with 4-digit PIN, counter order processing, and receipt printing).
- **Chapters 5–8:** Back-office management (Menu engineering, recipe costing, FEFO inventory tracking, expense recording, and financial profitability reports).
- **Chapters 9–11:** Staff administration & standard procedures (Employee directory, shift scheduling, opening/closing checklists, and troubleshooting reference).

**Interface Screenshot References:** Each chapter includes designated screenshot frames labeled `SYSTEM SCREENSHOT PLACEHOLDER` providing dedicated spaces for interface illustrations and terminal captures.

# Table of Contents

**Chapter 1 – Introduction & System Overview** ALL USERS

- 1.1 Core Capabilities
- 1.2 User Roles & Access Levels
- 1.3 Role Access Matrix
- 1.4 Operational Glossary

**Chapter 2 – Getting Started & System Navigation** ALL USERS

- 2.1 Signing In
- 2.2 Password Recovery
- 2.3 Navigation Structure
- 2.4 Tablet and Touchscreen Usage

**Chapter 3 – Shift Timekeeping (Time Clock Kiosk)** ALL USERS

- 3.1 Clocking In at Shift Start
- 3.2 Break Management & Clocking Out
- 3.3 Operational Constraints

**Chapter 4 – Counter Order Processing (POS)** ALL USERS

- 4.1 Selecting Order Mode (Dine-in vs Takeout)
- 4.2 Adding Items & Size Selection
- 4.3 Custom Add-ons & Preparation Notes
- 4.4 Applying Order Discounts
- 4.5 Checkout & Payment Processing
- 4.6 Official Receipt & Thermal Printing
- 4.7 Order Cancellation (Pre-Payment Void)

**Chapter 5 – Menu Engineering & Recipe Management** ADMIN ONLY

- 5.1 Creating a Menu Item
- 5.2 Size Variants & Ingredient Multipliers
- 5.3 Recipe Formulation (Raw Ingredients)
- 5.4 Packaging Supplies & "When" Scope
- 5.5 Profit Margin Analysis & Indicators
- 5.6 Managing Custom Add-ons

**Chapter 6 – Inventory & Stock Management** ALL USERS

- 6.1 Stock Health Indicators
- 6.2 Receiving Delivery Shipments (Restock)
- 6.3 Physical Stock Adjustments & Spoilage

6.4 Stock Valuation Reports

Chapter 7 – Expense Management & Cost Tracking ALL USERS

7.1 Expense Structure: COGS vs OPEX

7.2 Recording a Store Disbursement

Chapter 8 – Financial Reports & Profitability Analytics ADMIN ONLY

8.1 Reporting Timeframes

8.2 Sales Ledger & Transaction Inspection

8.3 Transaction Reversals: Void vs Refund

8.4 Profit Summary (P&L Breakdown)

Chapter 9 – Staff Management & Shift Scheduling ADMIN ONLY

9.1 Registering an Employee

9.2 System Login Credentials

9.3 Attendance & Payroll Timesheets

9.4 Shift Scheduling & Swaps

Chapter 10 – Standard Operating Procedures & Checklists ALL USERS

10.1 Morning Opening Checklist

10.2 Delivery Receiving Checklist

10.3 Evening Closing Checklist

Chapter 11 – Troubleshooting & Support Procedures ALL USERS

11.1 Operational Situations & Resolutions

Appendix A – Terminal Interface & Icon Reference

Appendix B – Supported Measurement Units & Conversion

# Chapter 1 – Introduction & System Overview

ALL USERS

**Purpose:** Understand the core features of Espro POS, user roles, access permissions, and standard operational terms.
**Where to find it:** System Root & General Navigation

## Overview

Espro POS is the central operations hub for Espro Coffee & Tea. Engineered specifically for high-volume cafe environments, the system unifies front-of-house counter transactions with automatic ingredient deductions, drink recipe costing, staff timekeeping, and daily financial reporting.

This manual serves as the comprehensive operating guide for all cafe personnel. It outlines standard workflows for daily register sales, inventory receiving, recipe setup, and shift management.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Main Counter Register & Navigation Overview ]**

( Paste UI Screenshot Here )

*Figure 1.1 – Espro POS counter interface displaying the product catalog and active order slip.*

## 1.1 Core Capabilities

Espro POS streamlines daily coffee shop operations through integrated functional areas:

- Counter Order Processing: Quickly ring up beverages, select cup sizes, apply customer customizations, and accept cash or digital payments.
- Automatic Stock Tracking: Every beverage sale automatically deducts raw beans, milk, syrups, and single-use packaging from current stock.
- Expiration Protection: Uses a First-to-Expire, First-Out (FEFO) inventory sequence to ensure older shipments are consumed first, minimizing ingredient spoilage.
- Integrated Shift Timekeeping: Staff enter a 4-digit security PIN at the counter kiosk to log shift start times, rest breaks, and departures.
- Financial & Cost Visibility: Instant calculation of daily revenue, Cost of Goods Sold (COGS), operating expenses, and net cafe profit.

## 1.2 User Roles & Access Levels

The system defines two operational roles to maintain store accountability and financial security:

1. Store Administrator (Owners & General Managers):

- Full access to all system modules, configurations, and reports.
- Authority to create menu items, configure recipes, set prices, and view financial statements.
- Immediate register selling access without requiring a time clock punch.

2. Employee (Baristas, Cashiers & Service Crew):

- Streamlined counter access to the POS register, inventory view, receipt printing, and daily expense recording.
- Attendance Guard: Staff must be actively clocked in at the counter kiosk to complete sales on the register.

## 1.3 Role Access Matrix

The following matrix outlines access permissions across all store modules:

| Module / Feature | Store Administrator | Barista / Cashier | Operational Rules |
|---|---|---|---|
| Counter Register (POS) | Full Access | Active Shift Required | Ring up orders, apply sizes and add-ons, accept payments, print receipts. |
| Dashboard | Full Access | Full Access | View daily sales totals, top-selling items, and low-stock indicators. |
| Inventory Management | Full Access | Full Access | View current stock levels, log deliveries, and record physical adjustments. |
| Expense Recording | Full Access | Full Access | Log daily operating payouts such as ice, water refills, and cleaning supplies. |
| Time Clock Kiosk | Full Access | Full Access | Punch in for shifts, record break intervals, and clock out using 4-digit PIN. |
| Menu & Recipe Editor | Full Access | Restricted | Create menu items, configure cup sizes, and assign ingredient recipes. |
| Financial Reports | Full Access | Restricted | Access detailed sales ledgers, profit summaries, and audit exports. |
| Employee Management | Full Access | Restricted | Manage staff directory, wage rates, PIN codes, and weekly rosters. |
| Void Completed Sale | Full Access | Supervisor Required | Cancels completed orders in the sales ledger and restores ingredient stock. |

## 1.4 Operational Glossary

Standard definitions used across the system and throughout this manual:

- COGS (Cost of Goods Sold): The total direct cost of raw ingredients (coffee beans, dairy, syrups) and single-use packaging consumed to produce sold items.
- Dine-in vs Takeout Scope: A rule governing packaging deductions. Dine-in excludes disposable cups, lids, and bags; Takeout automatically deducts them.
- Size Multiplier: A numeric scaling factor applied to raw recipe ingredients for different cup sizes (e.g., Regular = 1.0x, Large = 1.5x).
- Add-on: An optional customer customization (e.g., Extra Espresso Shot, Oat Milk Upgrade) with independent pricing and recipe stock deductions.

- 4-Digit Security PIN: A private four-digit code assigned to each staff member for counter kiosk authentication.
- FEFO (First-Expired, First-Out): An inventory rule where shipments with the earliest expiration date are consumed first during sales deductions.
- Void vs Refund: A Void cancels an erroneous transaction and restores deducted stock. A Refund returns customer payment but preserves stock deduction as operational spoilage.

# Chapter 2 – Getting Started & System Navigation

ALL USERS

**Purpose:** Sign in to the system, navigate the interface on desktop and tablet terminals, and access top-bar utilities.
**Where to find it:** Login Screen (/login) & Global Application Header

## Overview

Espro POS is accessible through modern web browsers on desktop PCs, laptops, and counter tablets. The interface provides a persistent navigation sidebar and a top utility bar designed for fast access during counter service.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Login Screen & Global Navigation Sidebar ]**

( Paste UI Screenshot Here )

*Figure 2.1 – System authentication screen with automatic domain resolution.*

## 2.1 Signing In

Standard sign-in procedure for all store personnel:

**TIP: USERNAME FORMAT**

Entering the username prefix alone is sufficient. The system automatically appends the store domain "@espro.ph".

**Procedure: Account Authentication**

1. Navigate to the Espro POS login page on your terminal.
2. Enter your assigned username or email address. (Entering "username" automatically completes to "username@espro.ph").
3. Enter your account password.
4. Click "Sign In".

**EXPECTED RESULT**

The login screen authenticates and redirects directly to the store Dashboard.

## 2.2 Password Recovery

If you cannot access your account:

1. Click the "Forgot password?" link on the sign-in screen.

2. Enter your registered email address and submit the request.

3. Follow the instructions received via email to set a new password.

4. Alternatively, a Store Administrator can reset employee passwords directly from the Staff Directory.

## 2.3 Navigation Structure

The interface is organized into two primary navigation areas:

1. Navigation Sidebar:

- Dashboard: Store sales metrics, inventory alerts, and top sellers.
- Point of Sale (POS): The primary counter register for processing customer orders.
- Inventory Management: Stock balance monitoring, restock logging, and physical adjustments.
- Expense Management: Logging store expenditures and operating disbursements.
- Menu & Recipes: Menu engineering, sizing, and recipe formulation (Admin only).
- Financial Reports: Daily sales ledgers, profit & loss, and audit exports (Admin only).
- Employee Management: Staff directory, shift scheduling, and attendance records (Admin only).
- Settings: Personal account details and password configuration.

2. Top Utility Bar:

- Search: Instant lookup for pages and menu items.
- Time Clock Kiosk (Clock Icon): Opens the attendance punch modal.
- Stock Alert Bell: Displays visual alerts for items at or below reorder thresholds.
- User Profile: Displays current logged-in user and provides direct sign-out access.

## 2.4 Tablet and Touchscreen Usage

When operating on touch terminals:

- The sidebar collapses automatically to maximize counter selling area.
- Tap the menu button (three lines) in the upper-left corner to expand the sidebar.
- Swipe inward from the left screen edge to open navigation on touch displays.

# Chapter 3 – Shift Timekeeping (Time Clock Kiosk)

ALL USERS

**Purpose:** Record shift attendance, manage rest break intervals, and ensure register selling permission using 4-digit PIN authentication.
**Where to find it:** Top Bar: Click the "Time Clock" (Clock Icon) button

## Overview

To maintain counter accountability, employees must be clocked into an active shift to complete sales on the POS screen. The counter Time Clock Kiosk provides an on-screen PIN pad for quick shift logging.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Time Clock Kiosk PIN Keypad Modal ]**

( Paste UI Screenshot Here )

*Figure 3.1 - Staff attendance modal for logging shift start, breaks, and departure.*

## 3.1 Clocking In at Shift Start

Standard procedure upon arriving for counter duty:

**Procedure: Starting a Work Shift**

1. Click the Time Clock button (clock icon) in the top utility bar.
2. Select your name from the employee dropdown list.
3. Enter your 4-digit PIN on the numeric keypad.
4. Click the green "Clock In" button.

**EXPECTED RESULT**
A green confirmation banner displays shift commencement. The kiosk closes automatically after 3 seconds, and the register is unlocked for selling.

## 3.2 Break Management & Clocking Out

Managing shift intervals:

1. Initiating a Break:

- Open Time Clock Kiosk > Select your name > Enter PIN.
- Click the orange "Start Break" button.
- The register selling permission is temporarily locked during the break period.

2. Ending a Break:

- Open Time Clock Kiosk > Select your name > Enter PIN.
- Click the blue "End Break" button. Shift tracking resumes and selling is immediately re-enabled.

3. Clocking Out at Shift Completion:

- Open Time Clock Kiosk > Select your name > Enter PIN.
- Click the red "Clock Out" button. Shift duration is committed to timesheets for payroll calculation.

## 3.3 Operational Constraints

Key timekeeping rules:

- Selling Permission: If an unclocked employee attempts checkout, a "Clock-In Required" banner prevents completion until clocked in.
- Forgotten PIN: Contact a Store Administrator to reset your 4-digit PIN in the Staff Directory.
- Administrator Bypass: Store Administrators have permanent selling permission and bypass the time clock requirement.

# Chapter 4 – Counter Order Processing (POS)

ALL USERS

**Purpose:** Process customer transactions, configure beverage sizes and add-ons, handle packaging scopes, settle cash and digital payments, and print thermal receipts.
**Where to find it:** Sidebar: Point of Sale (/pos) or Top Bar "New Sale"

## Overview

The POS register provides a touch-optimized interface for counter service. The menu catalog occupies the left viewport with category filters, while the active order slip and checkout controls reside on the right.

SYSTEM SCREENSHOT PLACEHOLDER

**[ POS Register Interface & Active Order Cart ]**

( Paste UI Screenshot Here )

*Figure 4.1 - Product catalog on the left, order slip and checkout controls on the right.*

## 4.1 Selecting Order Mode (Dine-in vs Takeout)

Before adding items, select the order mode using the toggle at the top of the cart:

- Dine-in: For in-store consumption using reusable tableware. Packaging supplies (disposable cups, lids, carry bags) are NOT deducted from inventory.
- Takeout: For to-go orders. Single-use plastic/paper cups, dome lids, straws, and carry bags are automatically deducted from stock.

Accurate selection ensures inventory counts remain aligned with physical storage.

## 4.2 Adding Items & Size Selection

Adding menu items to the active order:

1. Tap the item card in the catalog grid or search by name.

2. If multiple sizes exist (e.g., 16oz Regular vs 22oz Large), a size picker modal opens. Tap the requested size.

3. The selected item appears on the order slip with its line price and size variant.

## 4.3 Custom Add-ons & Preparation Notes

Applying item customizations:

- Click the item row or "Add-ons" button to configure customizations:
- Extra Espresso Shot (+₱30)
- Oat Milk Upgrade (+₱40)

- Flavored Syrups (+₱20)
- In the "Special Instructions" field, enter preparation requests (e.g., "Less ice", "Extra hot"). Notes appear on the printed receipt and kitchen display.

## 4.4 Applying Order Discounts

Applying promotional or statutory discounts:

- Click the "Discount" button on the order slip.
- Choose Fixed Peso (₱) or Percentage (%) discount mode.
- Enter the discount amount. The system computes the deduction and updates the Grand Total.
- Constraint: Discounts are clamped so they cannot exceed the order subtotal.

## 4.5 Checkout & Payment Processing

When the order is finalized, click "Complete Sale" to open the payment settlement modal:

**Procedure: Settling a Cash Transaction**

1. Select the "Cash" payment tab.
2. Enter the cash received or click a quick-tender chip (₱100, ₱200, ₱500, ₱1,000).
3. Verify the calculated "Change Due" display.
4. Click "Confirm Payment" (or press [Enter]).

> **EXPECTED RESULT**
> The sale is committed to the ledger, inventory batches are deducted via FEFO, and the official receipt displays.

**Procedure: Settling a Digital QR / GCash Transaction**

1. Select the "Digital / GCash" payment tab.
2. Instruct the customer to scan the counter QR Ph standee and remit the exact Grand Total.
3. Verify the payment confirmation on the merchant terminal or customer screen.
4. Check the confirmation box: "I confirm that payment has been received via GCash / QR".
5. Click "Confirm Payment".

> **EXPECTED RESULT**
> Transaction records under Digital payment with ₱0 change, stock is deducted, and the receipt displays.

## 4.6 Official Receipt & Thermal Printing

Upon payment confirmation, the receipt interface appears:

- Displayed Data: Store details, receipt reference, date, cashier name, Dine-in/Takeout tag, itemized lines, subtotal, discount, amount received, and change.
- Print Button: Formats and outputs the receipt to connected 80mm thermal printers.
- New Sale Button: Resets the register interface for the next customer in queue.

## 4.7 Order Cancellation (Pre-Payment Void)

To cancel an active order prior to payment:

1. Click the "Clear / Void" button on the order slip.
2. Select or enter a cancellation reason.
3. Confirm the void. The cart clears with no inventory or revenue impact.

# Chapter 5 – Menu Engineering & Recipe Management

ADMIN ONLY

**Purpose:** Configure catalog items, define multi-size drink variants, engineer raw ingredient recipes, set packaging scopes, and monitor profit margins.
**Where to find it:** Sidebar: Menu & Recipes (/menu)

## Overview

The Menu & Recipes module provides administrative controls for defining cafe offerings. Every item links to an exact bill of materials (raw ingredients and packaging supplies) enabling real-time COGS computation and automated inventory depletion.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Menu Editor & Atomic Recipe Costing Interface ]**

( Paste UI Screenshot Here )

*Figure 5.1 - Menu configuration modal showing size variants, ingredient recipes, and live margin analysis.*

## 5.1 Creating a Menu Item

Standard procedure for adding catalog offerings:

**Procedure: Adding a New Menu Offering**

1. Navigate to Menu & Recipes > Menu Items tab and click "+ Add Item".
2. Enter the Item Name (e.g., "Iced Spanish Latte").
3. Assign or create a Category (e.g., "Espresso Beverages").
4. Enter the Base Selling Price in Philippine Peso (₱).
5. Upload a product image (optional, max 5MB in JPG, PNG, or WebP format).
6. Configure size variants and ingredient recipes as outlined below.

**EXPECTED RESULT**
The item is registered in the catalog and displays on the POS register when enabled.

## 5.2 Size Variants & Ingredient Multipliers

Configuring drink sizes in the Sizes Editor:

- Define up to 6 sizes per menu item (e.g., 16oz Regular, 22oz Large).
- Ingredient Multiplier: Specifies the scaling factor for raw ingredients.
- Standard (1.0x): Uses baseline recipe quantities.

- Large (1.5x): Consumes 50% more raw ingredients (beans, milk, syrups). Packaging is deducted at 1 unit per drink.
- Retail Price: Set specific selling prices per size variant.
- Default Size: Designate one size as the primary default on the POS grid.

## 5.3 Recipe Formulation (Raw Ingredients)

In the Recipe Editor section, assign the raw ingredients consumed per unit:

- Example: Latte Formulation
- Espresso Beans: 18 g
- Fresh Whole Milk: 160 ml
- Simple Syrup: 15 ml
- Unit Conversion: Quantities can be entered in mass (g, kg) or volume (ml, l). The system handles internal conversions automatically.

## 5.4 Packaging Supplies & "When" Scope

Assign single-use service items under Packaging Supplies:

- 16oz PET Cup: 1 pc → Scope: "Takeout only"
- 98mm Flat Lid: 1 pc → Scope: "Takeout only"
- Paper Straw: 1 pc → Scope: "Always"

Scope Behavior:

- Takeout Only: Deducted exclusively when the register toggle is set to Takeout.
- Always: Deducted on every order regardless of service mode.

## 5.5 Profit Margin Analysis & Indicators

The Live Margin Analysis bar updates dynamically during recipe editing:

- COGS (Cost of Goods Sold): Sum of raw ingredient costs and packaging supplies based on active purchase prices.
- Margin Health Indicators:
- 🟢 Green (> 70% Gross Margin): Optimal cafe profitability threshold.
- 🟠 Orange (50%–70% Gross Margin): Standard threshold for specialty dairy beverages.
- 🔴 Red (< 50% Gross Margin): Low margin indicator requiring price or formulation review.

## 5.6 Managing Custom Add-ons

The Add-ons & Customizations tab enables creation of reusable extras:

- Define add-on items (e.g., Extra Espresso Shot, Oat Milk Upgrade, Caramel Drizzle).
- Assign selling price and raw ingredient recipe deduction.
- Link add-ons to specific categories or all menu items.

# Chapter 6 – Inventory & Stock Management

ALL USERS

**Purpose:** Monitor stock levels, log delivery shipments, record spoilage or audit adjustments, and export inventory valuation reports.
**Where to find it:** Sidebar: Inventory Management (/inventory)

## Overview

The Inventory module maintains real-time tracking of Raw Ingredients (coffee beans, milk, syrups) and Packaging Supplies (cups, lids, bags). Built around First-Expired, First-Out (FEFO) batch tracking, older perishables are consumed first to prevent waste.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Inventory Master List & Restock Batch Modal ]**

( Paste UI Screenshot Here )

*Figure 6.1 – Inventory balance monitoring, stock health cards, and delivery logging.*

## 6.1 Stock Health Indicators

Summary cards categorize inventory health at a glance:

- In Stock (Green): Active balance above minimum reorder threshold.
- Low Stock (Orange): Balance has reached or fallen below minimum threshold. Reorder required.
- Out of Stock (Red): Depleted balance (0 remaining). POS displays availability warnings.
- Near Expiry (Yellow): Batches expiring within 7 calendar days. Priority for counter use.
- Expired (Dark Red): Batches past expiration. Automatically removed from sales depletion.

## 6.2 Receiving Delivery Shipments (Restock)

Standard procedure for logging supplier deliveries:

**Procedure: Logging an Inventory Restock Batch**

1. Navigate to Inventory Management and locate the item in the master list.
2. Click the "Restock" button on the item row.
3. Enter the Quantity Received in the base measurement unit (e.g., 5000 g).
4. Enter the Purchase Unit Price paid (e.g., ₱0.85/g).
5. Enter the Expiration Date printed on the product packaging.
6. Optional: Enter the supplier PO or delivery receipt reference.
7. Click "Confirm Restock".

> **EXPECTED RESULT**
> The item balance increases immediately. A new batch record is created with active FEFO tracking.

## 6.3 Physical Stock Adjustments & Spoilage

Modifying inventory balances during audits or wastage incidents:

1. Locate the item in the list and click "Adjust".
2. Select the adjustment method:
   - Deduct / Spoilage: Enter quantity wasted (e.g., 1000 ml milk spilled) and select reason.
   - Set Exact: Enter the physical recount quantity (e.g., 4500 ml counted).
3. Confirm the adjustment. The balance updates and the event logs to the store audit trail.

## 6.4 Stock Valuation Reports

Access the "Valuation Report" tab to view total inventory asset worth:

- Displays batch-weighted monetary valuation across all active stock in Philippine Peso (₱).
- Export to PDF or CSV for accounting records and monthly balance sheets.

# Chapter 7 – Expense Management & Cost Tracking

ALL USERS

**Purpose:** Record daily store cash disbursements, categorize operational expenditures, and track overhead costs.
**Where to find it:** Sidebar: Expense Management (/expenses)

## Overview

The Expense module records operational cash outflows to provide an accurate Net Profit picture. It separates customer-driven COGS from daily operational expenses (OPEX).

SYSTEM SCREENSHOT PLACEHOLDER

**[ Record Expense Modal & Category Distribution Chart ]**

( Paste UI Screenshot Here )

*Figure 7.1 - Operating expense recording modal and monthly expense breakdown.*

## 7.1 Expense Structure: COGS vs OPEX

Expenses are segmented into two financial categories:

1. Cost of Goods Sold (COGS):

- Direct ingredient and packaging costs calculated automatically from POS transactions.

2. Operating Expenses (OPEX):

- Regular operational disbursements required to maintain store facilities:
- Utilities (electricity, water, communications)
- Daily Operational Supplies (tube ice, purified water refills, cleaning agents)
- Facility Rent & Lease
- Equipment Maintenance (espresso machine maintenance, grinder calibration)
- Marketing & Printing

## 7.2 Recording a Store Disbursement

Standard procedure for recording counter cash payouts:

**Procedure: Logging an Operational Expense**

1. Navigate to Expense Management and click "Record Expense".
2. Confirm the Expense Date (defaults to current date).
3. Select the appropriate Expense Category.

4. Enter the Payee / Vendor name.
5. Provide a clear Description of the expenditure.
6. Enter the Amount in Philippine Peso (₱).
7. Select the Payment Method (Petty Cash, GCash, Bank Transfer).
8. Click "Save Expense".

> **EXPECTED RESULT**
>
> The record is saved, reflected in monthly expense charts, and deducted from Net Profit in financial reports.

# Chapter 8 – Financial Reports & Profitability Analytics

ADMIN ONLY

**Purpose:** Analyze store revenue, inspect transaction audit ledgers, process voids and refunds, and review net profitability.
**Where to find it:** Sidebar: Financial Reports (/reports)

## Overview

The Financial Reports module delivers comprehensive store analytics for owners and general managers. It details transaction-level histories, sales trends, COGS breakdowns, and full Profit & Loss statements.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Sales Ledger & P&L Profit Summary ]**

( Paste UI Screenshot Here )

*Figure 8.1 – Audited sales ledger with item popover details and store profitability breakdown.*

## 8.1 Reporting Timeframes

Filter financial data using preset ranges at the top of the interface:

- Today: Real-time transactions since midnight (Asia/Manila).
- Yesterday: Prior day audited performance.
- Last 7 Days: Weekly trend analysis.
- This Month / Last Month: Comprehensive monthly reconciliation.
- Custom Range: User-specified date intervals.

## 8.2 Sales Ledger & Transaction Inspection

The Sales Report tab maintains an immutable record of all processed orders:

- Details: Receipt number, timestamp, cashier name, order mode, payment method, and total.
- Line Item Popover: Hover over or tap any transaction row to inspect ordered items, sizes, add-ons, and change issued.

## 8.3 Transaction Reversals: Void vs Refund

Only Store Administrators can reverse completed transactions in the ledger:

1. Void Transaction:

- Use Case: Order entered in error or charged duplicate.
- Financial Impact: Net revenue set to ₱0.

- Stock Impact: Restores all deducted ingredient and packaging quantities back into active batches.

2. Refund Transaction:

- Use Case: Customer return after beverage preparation or complaint.
- Financial Impact: Payment returned to customer.
- Stock Impact: Ingredients are NOT restored to inventory (recorded as operational spoilage).

## 8.4 Profit Summary (P&L Breakdown)

The Profit Summary tab compiles the store income statement:

- Gross Revenue: Total sales settled.
- Less COGS: Cost of ingredients and supplies consumed.
- Gross Profit: Revenue minus COGS.
- Less OPEX: Operating expenses recorded in Expense Management.
- Net Profit: Bottom-line store earnings.
- Export Options: Download summary reports in PDF or CSV format.

# Chapter 9 – Staff Management & Shift Scheduling

ADMIN ONLY

**Purpose:** Maintain employee profiles, configure counter PINs, manage shift schedules, and export timesheets for payroll calculation.
**Where to find it:** Sidebar: Employee Management (/employees)

## Overview

The Employee Management module centralizes human resource operations. It manages staff profiles, counter security PINs, system logins, weekly shift rosters, and audited attendance logs.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Staff Directory & Weekly Shift Roster Grid ]**

( Paste UI Screenshot Here )

*Figure 9.1 - Employee directory, PIN management, and weekly scheduling calendar.*

## 9.1 Registering an Employee

Standard onboarding procedure:

**Procedure: Adding a Staff Member**

1. Navigate to Employee Management > Staff Directory tab and click "Add Employee".
2. Enter legal Full Name.
3. Assign Role (Barista, Cashier, Shift Supervisor).
4. Set Employment Type and enter base Hourly Rate (₱).
5. Set a 4-Digit Security PIN for the counter kiosk.
6. Optional: Enter emergency contact person and telephone number.
7. Click "Save Employee".

**EXPECTED RESULT**
The employee is registered in the directory and can immediately punch at the Time Clock Kiosk.

## 9.2 System Login Credentials

Provisioning web application access:

- In the employee profile, enable "Grant ESPRO System Login Access".
- Assign an email username. (System auto-appends "@espro.ph").
- Set an initial password (minimum 6 characters).

- Staff can now log in to the POS terminal or assigned back-office modules.

## 9.3 Attendance & Payroll Timesheets

Under the Attendance tab:

- Live Monitoring: The "Who's In" panel displays currently clocked-in personnel and active break statuses.
- Punch Correction: If a punch was missed, click "Edit" on the timesheet row, enter corrected times, provide a mandatory audit note, and save.
- Payroll Export: Click "Export Timesheets CSV" to download an audited payroll file including:
- Regular hours worked.
- Overtime hours (automatically calculates 1.25x for shifts exceeding 8.0 hours).
- Late arrival flags (triggered for punches > 5 minutes after scheduled start).

## 9.4 Shift Scheduling & Swaps

Under the Shift Roster tab:

- Weekly calendar grid (Monday through Sunday).
- Click any date cell to assign shift templates (e.g., Morning Shift 6:00 AM – 2:00 PM).
- Use "Swap Shift" to exchange scheduled shifts between employees with automatic roster updates.

# Chapter 10 – Standard Operating Procedures & Checklists

ALL USERS

**Purpose:** Standard checklists for cafe opening, delivery receiving, transaction reversals, and closing procedures.
**Where to find it:** Counter Daily Operations

## Overview

Consistent operational routines ensure efficient cafe service and inventory precision. Follow these step-by-step checklists during daily counter shifts.

SYSTEM SCREENSHOT PLACEHOLDER

**[ Store Opening Dashboard & Low-Stock Alerts ]**

( Paste UI Screenshot Here )

*Figure 10.1 - Morning store overview displaying daily targets and inventory reorder alerts.*

## 10.1 Morning Opening Checklist

Execute 30 minutes prior to opening store doors:

**Procedure: Store Opening Sequence**

1. Power on the counter terminal and open the Espro POS application.
2. Open the Time Clock Kiosk, select your name, enter your 4-digit PIN, and clock in.
3. Review the Dashboard Stock Alerts card to identify low dairy, beans, or packaging supplies.
4. Verify the opening cash drawer float (e.g., P2,000 in small denominations).
5. Open the POS register screen and verify receipt printer connectivity.
6. Unlock cafe doors and commence service.

**EXPECTED RESULT**
Terminal is unlocked, attendance is logged, and register is prepared for counter orders.

## 10.2 Delivery Receiving Checklist

When receiving supplier shipments:

1. Verify physical items against the delivery invoice for quantity and packaging integrity.
2. In Espro POS, open Inventory Management.
3. Click "Restock" on each delivered item row.
4. Input quantity, unit cost, and expiration date from packaging.

5. Confirm restock. Inventory counts update immediately.

## 10.3 Evening Closing Checklist

Execute immediately following store closing:

**Procedure: Store Closing Sequence**

1. Count the cash drawer. Deduct opening float to determine cash drawer sales.
2. Open Expense Management: Log any cash paid out from register petty cash.
3. Review Dashboard Today Sales to reconcile cash and digital totals against the drawer count.
4. Open Time Clock Kiosk, enter your 4-digit PIN, and clock out.
5. Close the terminal application and power down hardware.

> **EXPECTED RESULT**
> Cash balances are verified, labor hours are committed, and store records are securely finalized.

# Chapter 11 – Troubleshooting & Support Procedures

ALL USERS

**Purpose:** Standard resolutions for common counter operational questions and terminal messages.
**Where to find it:** Counter Reference

## Overview

Standard operational procedures for addressing counter situations and terminal notifications:

## 11.1 Operational Situations & Resolutions

Standard troubleshooting reference:

| Observed Condition | Cause | Standard Resolution Procedure |
|---|---|---|
| "Clock-In Required" banner prevents checkout. | Cashier is not clocked in or is on break. | Open Time Clock Kiosk (Clock icon) > Select name > Enter PIN > Clock In (or End Break). Selling unlocks immediately. |
| Authentication Failure / Invalid Credentials. | Incorrect password or username entered. | Verify Caps Lock. Username prefix alone is accepted. Contact Administrator to reset credentials if unresolved. |
| Item displays "Out of Stock" on register. | One or more recipe ingredients has 0 stock balance. | Verify physical stock. If stock was delivered but unlogged, navigate to Inventory > Restock. Item unlocks once balance > 0. |
| Thermal printer does not output receipt. | Paper roll depleted, printer power off, or cable disconnected. | Inspect printer power and paper compartment. Once resolved, click "Print" again on receipt screen. |
| Customer requests digital payment cancellation. | Order settled via GCash but customer canceled. | Contact Administrator. Open Reports > Sales Ledger > Locate transaction > Click "Refund". Payment is returned. |
| Counter internet connectivity interrupted. | Temporary ISP network disruption. | Maintain active browser session. POS retains transactions locally. Data synchronizes automatically once connectivity restores. |
| Cashier forgotten 4-digit PIN. | Security code unavailable. | Contact Administrator. Open Employee Management > Staff Directory > Click "Change PIN" to assign a new 4-digit code. |
| Discount entry rejected. | Discount exceeds order total. | Discounts cannot exceed active cart value. Enter an amount equal to or less than cart subtotal. |

# Appendix A – Terminal Interface & Icon Reference

Standard interface icons and functional controls across counter terminals:

| Interface Element | Control Name | Functional Operation |
|---|---|---|
| 🕒 (Clock Icon) | Time Clock Kiosk | Opens staff attendance punch modal for shift commencement, breaks, and departure. |
| 🔔 (Bell Icon) | Stock Alert Indicator | Displays notifications for inventory items at or below minimum reorder thresholds. |
| 👤 (User Avatar) | Account Menu | Displays authenticated user and provides direct access to profile settings and sign out. |
| ☰ (Menu Drawer) | Mobile Navigation | Toggles the navigation sidebar on touchscreen and tablet displays. |
| [Dine-in / Takeout] | Packaging Toggle | Sets order mode between Dine-in (reusable ware) and Takeout (automatic packaging deductions). |
| 🗑️ (Clear Button) | Void Cart | Empties active order slip prior to payment settlement. |
| 🏷️ (Discount Button) | Apply Discount | Opens discount configuration modal for percentage or fixed monetary deductions. |
| 💵 (Complete Sale) | Payment Checkout | Launches payment settlement modal for cash tender or digital QR confirmation. |

# Appendix B – Supported Measurement Units & Conversion

Standard measurement units utilized in inventory management and recipe costing:

| Symbol | Unit Name | Classification | Conversion Standard |
|---|---|---|---|
| g | Gram | Mass (Raw Ingredients) | 1,000 g = 1 kg |
| kg | Kilogram | Mass (Bulk Packaging) | 1 kg = 1,000 g |
| ml | Milliliter | Volume (Liquids & Syrups) | 1,000 ml = 1 Liter |
| l | Liter | Volume (Bulk Dairy & Bases) | 1 Liter = 1,000 ml |
| pcs | Pieces | Discrete (Packaging Supplies) | Individual unit count |
